

Your vault is the platform.

One front door for you and your agents: **unisphere**, two Rust engines, Tavily for the web, and skills you simply ask for.

github.com/marsmike/agnostic-toolkit

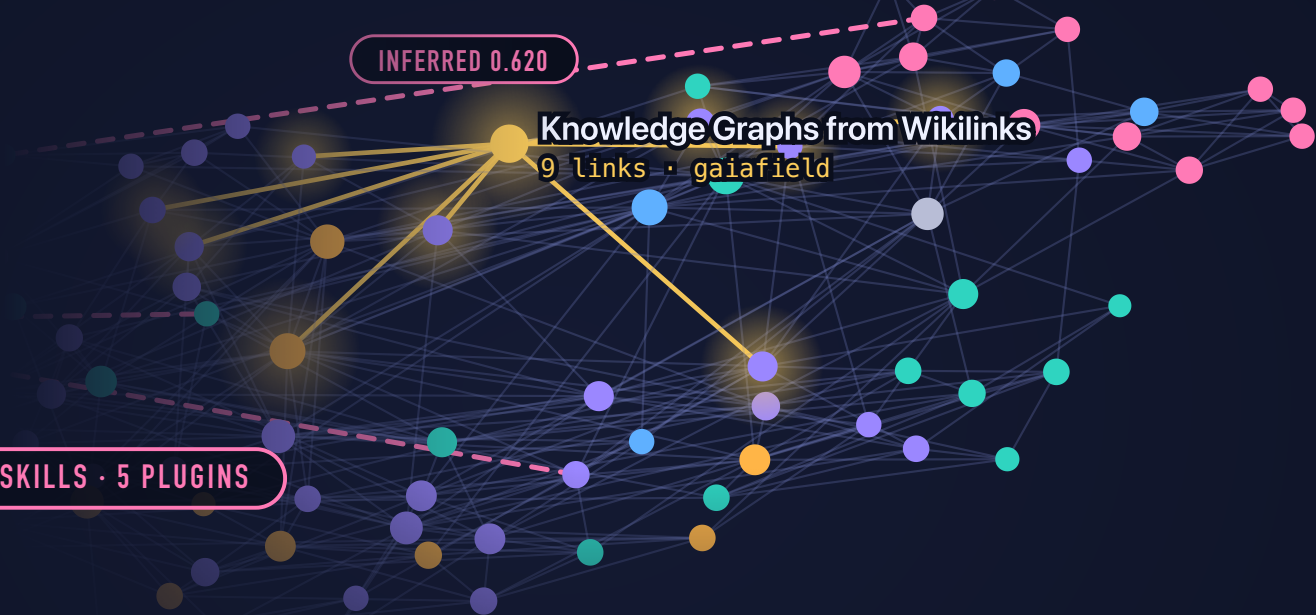

UNISPHERE

FARSIGHT

GAIAFIELD

TVLY

6 SKILLS · 5 PLUGINS

the front door · people read, agents add --json

unisphere

unisphere status

engines, plugins, vault, pipeline, companions: all current?

unisphere search agent memory

ranked full-text search (farsight)

unisphere graph neighbors <note>

links to and from a note --depth 2

unisphere graph path <a>

the shortest chain of links

unisphere graph candidates <note>

same topic, not linked yet

unisphere commands --json

the catalogue an agent starts from

unisphere link --vault <path>

put it all on ~/.local/bin

unisphere doctor · engines status

vault structure · engine versions

Rust · deterministic · on your PATH

The engines

farsight query <words> --k 5

BM25 over active notes

gaiafield index

wikilinks + frontmatter → SQLite graph

gaiafield neighbors <note>

depth, direction in|out|both

gaiafield stats

nodes, edges, dangling, top linked

gaiafield infer

embeddings → INFERRED edges

gaiafield candidates <note>

link suggestions, scored

gaiafield surprise

cross-domain pairs worth a look

example vault: **83** notes · **783** links

the one way to the web

tvly · Tavily

tvly search "<q>" --json

--time-range week · --topic news

--include-domains reddit.com

what the radar does for Reddit

tvly extract <url> --format markdown

clean page text, JS rendered

tvly map <site>

every URL on a site

tvly crawl <site> --max-depth 2

a docs section, page by page

tvly research "X vs Y"

cited report, 30–120 s

tvly --status --json

version, authenticated?

TAVILY_API_KEY · **1 credit** a search · **\$2/week**

just say it · Claude picks the skill

Skills

"distill my inbox"

obsidian:distill

"run the pipeline"

obsidian:pipeline

"find orphans · vault health"

obsidian:vault

"what's new in my feeds"

radar:radar

"save a handoff" · "resume"

handoff:handoff

"search the web for ..."

tavily:search

"research X vs Y"

tavily:research

"what's due today?"

todoist-cli (td)

radar.py --json

Radar

scan

judge Reader items against your interests

sensors

HN · Hugging Face · GitHub · Reddit · RSS

signal --check

named things + web check (Tavily)

weekly

the week's capture, 01_Capture/

gaps

what the feeds missed, per interest

scout · discover

new sources · new feeds (OPML)

kagi search|news|answer|summarize

Kagi on demand

plugins/radar/scripts/radar.py · via uv run

Claude cloud routines · every 3 h

Cloud

● Pipeline

58 */3

● Signal Radar

28 2–23/3

● Watchdog

58 2–23/3

Pipeline ingests, distills and commits. Signal Radar: **sensors** + **signal** --check. Watchdog pushes only when something is wrong.

next to unisphere, on your PATH

Obsidian · Todoist

obsidian daily

open today's daily note

obsidian daily:append content="..."

add a line to it

obsidian open file=<note>

open a note in the app

obsidian backlinks file=<note>

format=json

obsidian orphans · unresolved

the app's own health checks

td today · td upcoming

what's due

td task add "..." --json

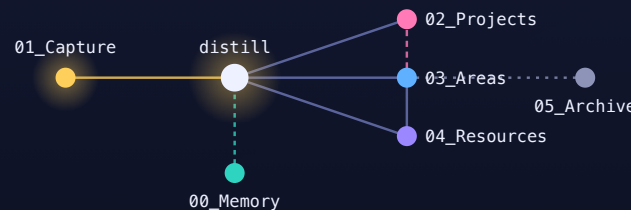

structured add, for agents

obsidian: app running · **td**: its own login

TheVoid · PARA · agent-maintained

The vault

Captures land in **01_Capture**, distill writes linked notes, the capture retires to **05_Archive**. **00_Memory** holds the radar, the DLQ and the run state. **Index.md**, **Maps/** and **Now.md** are generated, never edited.
